

Document Management to AI Compliance Partner.

A live B2B compliance platform — built today, scaling into a connected, AI-powered ecosystem that redefines how SMEs manage H&S and Employment Law.

WHAT · LIVE TODAY

A Production-Ready Compliance Platform

Not a prototype. A live portal managing real documents, real clients, and real compliance workflows — right now.

Document Management

Approval workflows, version control, expiry tracking across all modules.

Compliance Scoring

Live compliance % per site, gap tracking and required-template logic.

Multi-Site & Groups

Group owner hierarchy — manage dozens of sites under one parent company.

Real-Time Alerts

Instant notifications to consultants and clients via server-sent events.

H&S Incident Tracking

Severity, milestones, linked documents and auto-generated reports.

Training Records

Training bookings and certificates visible directly in the portal.

Secure Client Uploads

Expiring upload folders with granular access control and audit log.

Employment Law Cases

Case management with document bundle builder and PDF generation.

Three Stakeholders. One Platform.

Guardian Consultants

- ▶ Manage client documents & approvals
- ▶ Track compliance across all sites
- ▶ Handle EL cases end-to-end
- ▶ Create training bookings

Guardian Admin Team

- ▶ Full platform visibility & control
- ▶ Manage companies, sites & users
- ▶ Configure modules & templates
- ▶ Access reports & audit logs

Client Companies

- ▶ Live compliance dashboard per site
- ▶ Review & approve documents
- ▶ Access training records
- ▶ Raise support requests

All three roles access the **same platform** — different views, same data.

Client users see **only their own** sites, documents and compliance status.

Full **audit trail** on every action — defensible compliance history at all times.

HOW · BUILT TO LAST

Production-Grade. Secure. Scalable.

Every module in the roadmap builds on a solid, proven technical foundation — no rewrites, no compromise on security or scale.

React + TypeScript

Type-safe, tested frontend. Fast and accessible.

PostgreSQL + Drizzle

Relational DB with schema-validated, type-safe queries.

Role-Based Access

Tenant isolation — every query scoped to what the user can see.

Real-Time SSE

Server-sent events — no polling. Live updates instantly.

Full Audit Logging

Every action logged with user, timestamp and context.

Cloud Object Storage

Documents and PDFs in GCS. Secure, scalable, redundant.

PDF Generation

pdfkit + LibreOffice pipeline — compliance PDFs on demand.

API-Ready

RESTful JSON API — designed for CRM sync and Guardian App integration.

Expertise + Platform. Neither Alone Is Enough.

THE MARKET TODAY

- ▶ Consulting firms — expert advice, no technology
- ▶ SaaS tools — software with no domain expertise
- ▶ Generic document managers — no compliance logic
- ▶ No combined H&S + HR + Employment Law platform for SMEs

GUARDIAN GROUP

- ▶ Deep H&S and Employment Law consultancy expertise
- ▶ Owned, proprietary compliance platform — a permanent moat
- ▶ Three modules unified: H&S, HR, and Employment Law
- ▶ Real-time compliance scoring with full audit history

Vision: To be every SME's proactive, transparent, and efficient compliance partner — delivering expertise backed by technology that no single-axis competitor can replicate.

Five Revenue Drivers

01

Client Stickiness

Compliance data and approval workflows locked in the platform. High switching costs reinforce annual renewals.

Deep lock-in

02

Cross-Sell Surface

Training, modules, and services bookable directly through the portal — surfacing upsell at every touchpoint.

Built-in upsell

03

Consultant Efficiency

Digital workflows and auto-generated reports target >0.5 days saved per consultant per week — directly increasing billable capacity.

>0.5 days/wk

04

Retained Contract Uplift

The portal becomes a priced, named deliverable in every retained contract — not just consultant hours.

New revenue line

05

Future SaaS Monetisation

White-label or direct subscription tiers open a scalable recurring revenue stream beyond consulting. (Year 3+ vision.)

Year 3+ potential

From Document Platform to Compliance Ecosystem

The platform is the foundation. The roadmap transforms it into a connected, intelligent compliance partner.

STAGE 1 — NOW

Document Management Platform

- ▶ Live H&S, HR & EL modules
- ▶ Approval workflows & compliance scoring
- ▶ Multi-site group structure
- ▶ Role-based access & audit trail

STAGE 2 — YEAR 1-2

Connected Data Ecosystem

- ▶ Guardian App — on-site audits & data capture
- ▶ CRM API sync across all brands
- ▶ Training module with booking APIs
- ▶ Asset register & inspection records

STAGE 3 — YEAR 2-3

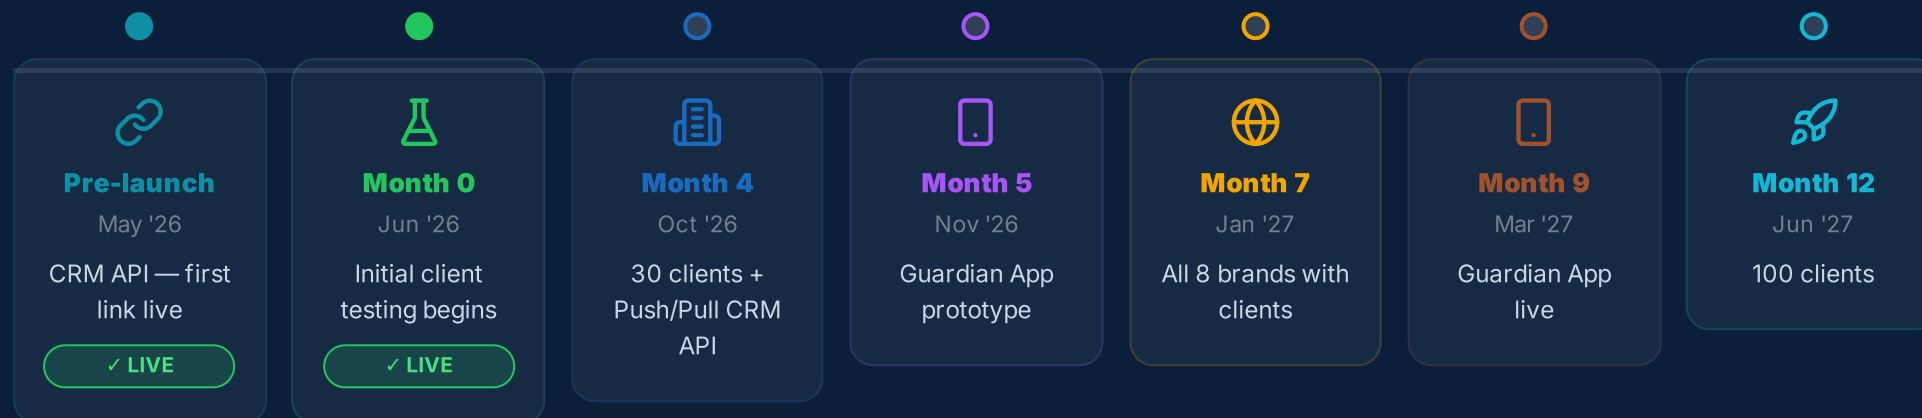

AI-Enabled Compliance Partner

- ▶ Auto-generated audit reports
- ▶ Compliance gap detection
- ▶ Predictive risk flags for clients
- ▶ Intelligent pathway recommendations

Each stage builds on the last — data collected today becomes the foundation for AI insights tomorrow.

0–12 Months: Key Milestones

Month 0 = initial live client testing (Jun 2026)

0–12 Months

Live client testing, CRM sync, all 8 brands onboarded, Guardian App launched.

12–18 Months

Module expansion — asset registers, risk management, HRIS, group reporting.

18–24 Months

AI intelligence layer — auto-reports, gap detection, intelligent pathways.

0-12 Months: Six Pillars

A Stabilisation

- ▶ Performance and reliability improvements
- ▶ Efficiency tooling for consultants
- ▶ Support workflows and rapid iteration

B Client Onboarding

- ▶ Initial client testing from Jun 2026
- ▶ Onboarding across all 8 group brands
- ▶ Target 30 live clients by Oct 2026
- ▶ All brands live by Jan 2027

C Training Module

- ▶ Full training module development
- ▶ Online and in-person booking APIs
- ▶ Certificate tracking and visibility
- ▶ Client-accessible training records

D Tech Team Build

- ▶ Hire CTO to own technical strategy
- ▶ Two additional developers
- ▶ Structured sprint delivery model

E Guardian App

- ▶ Mobile & tablet app for consultants on-site
- ▶ On-site data capture — audits, assessments
- ▶ QC validation before automatic portal sync
- ▶ Launch target: Mar 2027

F CRM API Sync

- ▶ First API link to CRM — May 2026
- ▶ Full bidirectional CRM sync by Oct 2026
- ▶ Client data unified across systems
- ▶ Reduces manual admin for Guardian team

The Data Loop That Changes Everything

When the Guardian App and CRM sync are live, Guardian becomes a closed-loop compliance engine — data flows in from the field, out to clients, and back into Guardian's systems automatically.

Zero Re-entry

On-site data flows directly to the portal — no manual transcription.

CRM in Sync

Client records in CRM and portal always match — one source of truth.

Auto-Reports

Submissions trigger draft reports — consultants review, not write.

Defensible Records

Timestamped, QC'd evidence — audit-ready at all times.

ROADMAP · GUARDIAN APP — LAUNCH MAR 2027

The Guardian App.

On-Site. Structured. Synced.

A dedicated mobile and tablet app for Guardian consultants — conducting audits, inspections and assessments in the field, with every result automatically synced to the client's portal in real time.

H&S Audits

Fire Safety

HR Compliance

Asset Testing

Risk Assessments

Central Template Library

One source of truth, pushed to all app users

On-Site Capture

Photos, signatures, pass/fail — on device

Asset Register Link

Each result tied to a specific asset or site

Auto-Sync to Portal

QC'd and live for clients in seconds

Used by:

H&S Consultants

HR Consultants

Fire Safety Advisors

Engineers & Inspectors

12–18 Months: Module Expansion

With the core platform stable and clients onboarded, Year 2 H1 expands the module portfolio — transforming the portal from a document manager into a full compliance operating system.

Asset Registers

Digital asset lifecycle — machinery, equipment, fire assets, vehicles. Full inspection and test history per asset, linked to compliance records.

Compliance Risk Management

Formalised risk scoring, controls, and treatment plans. Clients manage their risk register within the portal — visible to consultants in real time.

HRIS Module Integration

Connect HR data — employee records, contracts, absence — for joined-up people and compliance management across H&S and Employment Law.

Group-Level Reporting

Portfolio-wide compliance views for multi-site operators and group owners. Executive dashboard showing compliance health across all brands and sites.

18–24 Months: The AI Layer

Guardian's proprietary compliance dataset — built from every document, audit, and inspection — becomes the foundation for AI that no new entrant can quickly replicate.

Auto-Generated Reports

Draft audit reports from on-site data — consultants review, not write.

Compliance Gap Detection

AI surfaces missing or overdue documents before anyone has to check.

Intelligent Pathways

Document finder personalised to client sector, profile, and history.

Document Intelligence

Auto-classify uploads, extract compliance obligations, assign renewal dates.

For Consultants

Significant reduction in routine report-writing time. More capacity for billable advisory work.

For Clients

Proactive alerts, plain-English compliance summaries, and predictive risk flags — compliance becomes effortless.

The Long-Term Platform Vision

Beyond Year 2, Guardian Group becomes a full compliance ecosystem — scalable, white-labelable, and powered by proprietary AI.

Full Compliance Ecosystem

H&S, HR, Employment Law, Training, Risk Management, and Asset Registers — unified in one platform. The go-to compliance partner for any UK SME.

White-Label & SaaS Subscription Tiers

License the platform to other consulting firms or offer self-serve SaaS tiers — recurring revenue at software margins, alongside retained consulting.

Predictive Compliance AI

Models trained on years of multi-client data predict incidents and breaches before they happen. A defensible, compounding data moat.

Open API Ecosystem

Payroll, HR platforms, insurers and health surveillance providers connect via API — Guardian becomes the compliance backbone of the SME supply chain.

Market Expansion

Geographic expansion beyond UK, sector-specific modules, and potential M&A of smaller consulting practices onto the platform.

Proactive. Transparent. Efficient.

From document management platform today — to AI-enabled
compliance partner for every UK SME.
